Gartner siem magic quadrant 2020 pdf

We believe Gartner Magic Quadrant provides a graphically competitive position of four types of technology providers (Leaders, Visionaries, Niche Players and Challengers) in markets where high growth and provider differentiation differ. In our opinion, the goal of Magic Quadrant is to help organizations easily evaluate vendors and understand their strengths and prudence. Exabeam was one of 16 vendors evaluated in the Gartner Magic Quadrant for Security Information and Event Management (SIEM) 2020, and was recognized as a Leader in space for its Security Management Platform. We believe this placement validates our vision to build SIEM that improves threat detection, incident investigation, and response to security operations and an inside threat team. Through its modular deployment model, Exabeam offers unlimited log collection, machine learning for user and device behavior analysis, and automated incident investigation and response, all at a simple user-based price. Download a copy of your free 2020 report now to evaluate top industry vendors and gain insight into important market trends. Read this report where we believe you will learn: Information Analysis security and event management (SIEM) Real-world Market considerations for planning and deploying siem system Evaluation of strength and prudence for 16 major vendors Gartner Magic Quadrant for Information Security and Event Management Systems, Kelly Kavanagh, Toby Bussa, Gorka Sadowski, February, 19 2020. This chart is published by Gartner, Inc. as part of a larger research document and should be evaluated in the context of the entire document. Gartner documents are available upon request from here. Gartner does not endorse any vendors, products or services described in its research publications, and does not advise technology users to select only those vendors with the highest ratings. See Why LogRhythm Has Been Named a Leader for 8 Consecutive Years Once Again, Gartner has named LogRhythm as a Leader in the Information Management Magic Quadrant and Security Events (SIEM) based on the completeness of vision and ability to execute. Gartner evaluated LogRhythm and 15 other vendors as part of the Gartner Magic Quadrant 2020 for SIEM. We are honored to be recognized as SIEM Leader by Gartner for the eighth year This underscores LogRhythm's leadership in the market, validates the strength of our vision for NextGen SIEM, and speaks to LogRhythm who is innovative and and SIEM's development approach, said Mark Logan, CEO of LogRhythm. More important is to look at how our efforts are positively impacting our customers, whether that is by preventing analyst burnouts, easy and rapidly emerging threats, or providing a means for greater governance of their corporate security initiatives. The list of challenges facing security practitioners is daunting, and we are thrilled that our platform helps our customers stay ahead of them. The editors at Solutions Review highlight what has changed since Gartner's last iteration of the Magic Quadrant for SIEM and provide analysis of the report. Tech research giant Gartner, Inc. Recently released Gartner Magic Quadrant 2020 for SIEM. You can download it here. Gartner researchers define SIEM (Security Information and Event Management) with the need for customers to analyze security event data in real-time, which supports early detection of attacks and breaches. SIEM systems collect, store, investigate, support mitigation, and report security data for incident response, forensics, and regulatory compliance. In addition, in their definition of SIEM, Gartner commented on the need for data aggregation from across the company's network and normalization of that data for analysis. In addition, SIEM works to facilitate monitoring user activity, and compliance. In the Gartner Magic Quadrant 2020 for SIEM, Gartner noted that threat management and responses in particular encouraged most adoptions; businesses with limited cybersecurity resources find SIEM threat management attractive to larger clients or partners. Meanwhile, compliance encourages some adoption but companies weigh it as more of a benefit than a core focus. Gartner researchers do consider the SIEM market competitive and mature: they noted the company continues to seek external or managed service support for their SIEM, cybersecurity staffing crisis contributes to the atmosphere of uncertainty surrounding the deployment and maintenance of SIEM. In fact, one of the few predictions Gartner offers in the report concerns this emphasis on managed services. According to them, managed security services will continue to grow as the need for continuous and constant monitoring becomes widespread. Otherwise, the report largely focuses on SIEM as it is today, offering virtually no predictions for the future of the market. Instead, the report explores the three main use cases of SIEM deployment and provides several potential criteria for choosing SIEM solutions. This includes the budget, scale, and complexity of the product. Hackers don't wait for the world crisis to end. Our SIEM Buyer Guide helps you evaluate the best solutions for your business use case and displays leading profile profiles, as well as an overview of market categories. In the Gartner Magic Quadrant 2020 for SIEM, researchers evaluated the strengths and weaknesses of providers considered the most significant in the market. Then, it gives graph readers (eponymous Magic Quadrants) who plan vendors based on their ability to execute (Y-axis) and completeness of their vision (X-axis). The graph is divided into four quadrants: Niche Players, Challengers, Visionaries, and Leaders. At Solutions Review, we read the report, available here, and issued a key takeaway. Gartner Magic Quadrant 2020 for SIEM is the fourteenth iteration of the report; the last report was released in 2018. Gartner introduced this category in 2005—in fact, their researchers created the term SIEM itself. According to Gartner, SIEM combines SEM (incident monitoring and management) and driver's license (log management and compliance). Finally, Gartner named 16 vendors to siem magic quadrant in 2020; However, Gartner did mention some vendors who didn't make enough inclusion criteria this year including Huntsman Security and Lookwise. This year's inclusion criteria allows FireEye and HanSight to enter as Niche Players. However, changes in revenue or geographic attendance criteria do not include BlackStratus, Netsurion-EventTracker, and Venustech. Gartner Magic Quadrant 2020 for SIEM is, in effect, the story of two quadrants — Niche players and leaders. This year, no vendor has received a Challenger title. Micro Focus, previous single challenger the last SIEM report, instead moving down and to the left into niche players. Gartner praised his out-of-the-box compliance use case. In the report, Gartner noted that market maturities caused the number of Challengers to decrease. Meanwhile, only LogPoint (formerly a Niche Player) is placed in the Visionary Quadrant, moving significantly to the right in Completeness vision. The researchers noted its original multitenant infrastructure through a federation model and analysis of user and entity behavior that SaaS (UEBA) delivered. Visionary is defined as providing a powerful functional product that has the Ability to Execute lower. However, throughout SIEM Magic Quadrant Gartner conducts solution evaluations based on their SOAR capabilities, which can show SOAR as a criteria for future inclusion. Perhaps it can push vendors into the Challenger and Visionary Quadrants in a subsequent report. FireEye, AT&T Cybersecurity, McAfee, Fortinet, HanSight, ManageEngine, Micro Focus, and SolarWinds all appear in the Niche Player Quadrant. Note that Gartner does not consider Niche Players inferior to Leaders; Niche Players instead provides SIEM technology that matches specific SIEM use cases or siem functional requirements subsets. In fact, Gartner greatly praised the Niche Players and their abilities. For example, SolarWinds offers a do-it-yourself approach and a repository of out-of-box threat detection rules. ManageEngine's Log360 solution supports automatic discovery of Syslog devices. Fortinet offers original and out-of-the-box compliance packages with powerful asset discovery features. In addition, McAfee offers two-way integration for automated response and an extensive portfolio of security operations solutions. AT&T Cybersecurity provides strong integration and frequently updated content detection. Meanwhile, FireEye offers Managed Detection and Response with 24/7 monitoring and extensive open APIs. Lastly, HanSight offers technology that facilitates core SIEM functionality. In terms of actual movement, the majority of vendors move closer together, almost forming clusters. ManageEngine moves up while SolarWinds moves a little more to the right. Fortinet moves slightly to the left and AT&T Cybersecurity (formerly AlienVault) moves down. The biggest move came from McAfee down from quadrant Leader to Niche Player. That leaves seven Leaders in the Gartner Magic Quadrant 2020 for SIEM: Splunk, LogRhythm, Dell Technologies (RSA), Rapid7, Securonix, Exabeam, and IBM. For vendor movements, RSA is moving down, now it only rests on a line above the Quadrant visionaries. Its RSA NetWitness platform offers a multistage analytics engine. Also, Gartner praised LogRhythm for its various compliance reports across industries and regulations around the world. In addition, LogRhythm gained attention due to a strong set of options for running its core SIEM solution, including physical, software ... and SaaS. Meanwhile, Securonix and Exabeam are both moving up, although Exabeam is moving more into left and Securonix more to the right. Exabeam offers Smart Timelines to support newer SIEM users through machine learning, while Securonix offers advanced obfuscation features, with role-based access control (RBAC) workflows. The supreme leader, Splunk and IBM, also had little movement; Splunk moves left and IBM more up. IBM offers robust security event data collection capabilities, while Splunk receives praise for some of its delivery options. The largest movement came from Rapid7, the only previous member of the Visionaries Quadrant. It moves significantly into the Leader Quadrant; Gartner cited the federation's identity management support and its endpoint protection. Read Gartner Magic Quadrant 2020 for SIEM here. Ben Canner is an author and technology analyst of companies that include Identity Management, SIEM, Endpoint Protection, and Cybersecurity writ large. He holds a Bachelor of Arts degree in English from Clark University in Worcester, MA. She previously worked as a corporate blogger and ghost writer. You can contact him via Twitter and LinkedIn.
